City of Newburgh, NY: At the request of the City water system, we issued an Administrative Order incorporating a revised schedule to complete the second round of source monitoring required under the Long Term 2 Enhanced Surface Water Treatment Rule. This modification is the result of changes in source water due to the City's on-going response to the PFOS contamination of Washington Lake (the former primary source for the City's drinking water).

Ellsworth Airforce Base PFAS Contamination

Investigations under Superfund for perfluoro alkyl substances (PFAS) at Ellsworth Air Force Base indicate ground water and human health exposures are no longer under control. These environmental indicator changes will rescind the Sitewide Ready for Anticipated Use (SWRAU) GPRA measure for the site. Alternate water was supplied to drinking water users in early October 2018 (a separate hot topic in Oct 2018). Testing of additional off-base drinking water sources is in progress, and the Air Force is set up to provide bottled water immediately should any additional drinking water be found over the health advisory of 70 ppt PFOA/PFOS.
